

Pension as of January 1 2023 up by 9,73%!

We are pleased to report that in these times of high inflation, we are once again able to increase pensions for all members. As of 1 January 2023, we will increase pensions by 9.73% (in January 2022 this was 2.12%).

This applies to active members, deferred members and pensioners. Although this does not follow the entire price index, it does at least compensate for a large part. We have never awarded such a high indexation before. In its decision-making, the Board has therefore explicitly taken into account balance and the interests of all participants. This takes into account the direct decline in purchasing power of pensioners on the one hand and the (poor) economic prospects on the other. The Board is of the opinion that, even after this indexation, the fund will remain financially strong enough to absorb financial setbacks as much as possible and to enable a smooth transition to the intended new pension system.

The effect of the increase on the participants' personal pension is communicated in the Uniform Pension Overview that we send out annually. Pensioners will receive this overview in December 2022. Active and deferred participants will receive this in the course of 2023.
